

# 5F

Community Cluster.....5

Landscape Class.....F

## Description

These counties are in Idaho, Montana and the Dakotas and are Interior Rangelands that have historically experienced low fire but may be at risk for larger, long duration fires.

## Challenges and Opportunities

### Vegetation and Fuels

Local discretion should be used to determine the importance of fuel treatment, which treatment is applicable and what is affordable based on the use of local resources.

### Homes, Communities and Values at Risk

Individual homeowners can be proactive on home defensive actions.

### Human-Caused Ignitions

Human caused ignitions are not as great here as in other parts of the country, but may deserve attention if a local situation dictates.

### Effective and Efficient Wildfire Response

Prepare for large, long duration wildfires.

## Example of a Typical County

*Perkins County, South Dakota:* This rural county includes Grand River National Grassland and has experienced a few large fires.

## National Priorities

Vegetation and Fuels	Moderate
Homes, Communities and Values at Risk	Very Low
Human-Caused Ignitions	Low

**Effective and Efficient Response:**  
Counties in this combo have high risk to large wildfires and most counties have less potential for resource benefits than others.
